

Neonatal Ophthalmology

Program Summary

'Neonatal Ophthalmology' is a one-day CME to refresh our knowledge about normal visual development and the various obstacles to it that could occur in the first year of a child's life. This is a less often visited area by pediatricians and ophthalmologists alike and several myths about it prevail in the fraternity and among the community.

The conference aims to share knowledge about the screening methods used for infants and discuss the diagnosis and management of various common disorders that affect children below the age of 1 year.

Invitation

The first year of a child's life is crucial for ocular development; failure to recognize and treat ocular conditions early on in a child's life can lead to serious consequences.

L V Prasad Eye Institute, Bhubaneswar invites ophthalmologists and pediatricians to a CME program titled "Neonatal Ophthalmology" as a part of its 4th anniversary celebrations. The program is intended to give an overview of examination techniques and management of the most common ocular problems in an infant. Well known, experienced practitioners from the field will share their insights with us.

The program promises to add to our knowledge and widen our patient care initiatives.

We look forward to your participation

Sincere regards

Siddharth Kesarwani
